Controls

45MBAA Thermostat Choices (if not using the optional 1401 Wired Control):

KSACN1401AAA

- Most 24-Volt thermostats will work for a 45MBAA with an Electric Heat package, refer to the Application/Installation instructions for specific details for the model installing.
- We strongly recommend that these systems are always wired to operate as a Heat Pump, Conventional will work, but will not allow H/P lockout.

Heat Pump Wiring –	Heat Pump Lock Out Available
Conventional Wiring –	No Heat Pump Lock Out Available

- The 45MBAA with an Electric Heat package does not require the thermostat to sense outside temperature to operate.

45MBAA Control Overview

- As of 5.21.2025, the Install Manual and HVACPartners and does not have any DIP switch information.
- The Product Manual on HVACPartners, has information, but appears to have the controls mixed up.
- This training has swapped all information to match the label on the unit.

Controls

45MBAA Control Overview

- As previously mentioned, the 45MBAA can use a 1401 Wired Controller or standard 24-Volt thermostat (both purchased separately).
- The built-in 24-Volt interface can provide further flexibility, functionality and control by a 3rd party 24-Volt thermostat.
- The optional 24-Volt control can be wired to the fan coil using 18 gauge solid or stranded wire.
- Do not connect the 1401 Wired Controller & a 24-Volt Thermostat at the same time.

45MBAA Quick Setup Guide

Application: Heat Pump with or without Electric heat

SW1-4 – Turn ON for 1401 Wired Control, Scenario 1
SW1-1 – Turn ON for 24-Volt Control, Scenario 2

SW4-1~3 – If electric heat kit is installed set using charts provided, if no kit leave all OFF.

S4-4 – Leave ON if no electric heat kit.
S4-4 – Leave ON if using 24-Volt control with 5, 8 or 10kW electric heat kits
S4-4 – Turn OFF only if using 24-Volt control with 15, 20 or 25kW electric heat kits

For this application, all others can remain in their default position.

Electric Heat & Staging Settings – SW2 DIP Switches

Scenario – 1

SW2-1: Control Scenario 1
Temperature differential to activate first stage auxiliary heat.
Default is OFF 4°F, ON for 2°F

SW2-2: Electric heat on delay.
Default is OFF for NO delay, ON for YES

SW2-3: Electric auxiliary heating delay to start time (works with SW2-2)
Default is OFF for 15 min, ON for 30 min

SW2-1: Control Scenario 2
Compressor Running Compensation (Demand working with heat pump+ Electric heat) Default is OFF for Faster Compressor, ON for Slower Compressor

Scenario – 2

SW2-4: Compressor/Auxiliary heat outdoor ambient lockout.
Default OFF – Compressor allowed to operate to low limit set by S3
ON – Electric heating allowed to operate to high limit set by S3
See S3 switch info for more details.

S3 Rotary Switch & DIP SW2-4 – Ambient temperature controlled by electric heating or compressor.

Scenario – 1

SW2-4 ON – Compressor/Auxiliary heat outdoor ambient lockout

The operation of heat pump is limited by the outdoor temperature, and the operation of auxiliary heat is not limited.

The system makes judgments according to the following rules:

1) The compressor can be operated when the outdoor temperature is ≥ S3 DIP switch temperature +2 °C.
2) The compressor cannot be operated when the outdoor temperature is lower than the S3 DIP switch temperature.

Scenario – 2

SW2-4 OFF – Compressor

The operation of heat pump is limited by the outdoor temperature, and the operation of auxiliary heat is not limited.

The system makes judgments based on the following rules:

1) The compressor cannot be operated when the outdoor temperature is lower than the S3 DIP switch.
2) The compressor can be operated when the outdoor temperature is ≥S3 DIP switch temperature +2 °C.

Scenario 2
24-Volt Control

45MBAA Set Up Options (end)

Full DIP/Rotary Switch Explanations

Scenario 1
1401 Wired Control

Scenario 2
24-Volt Control

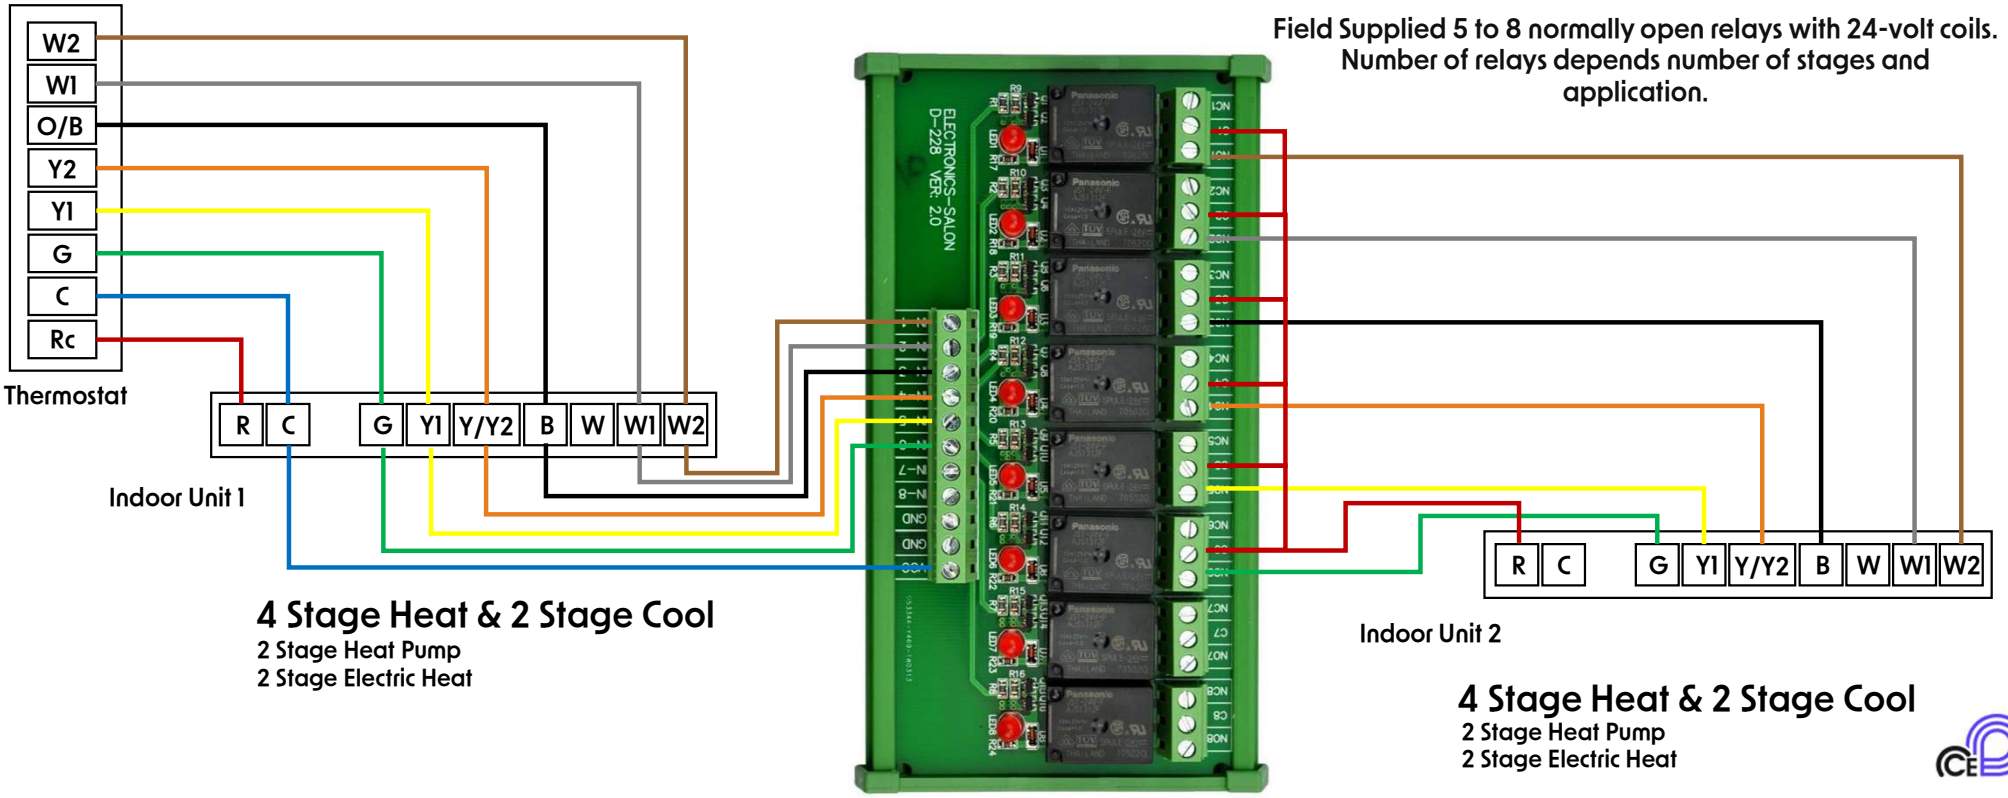
SW1	Control type	Note
	Wired controller / 24V thermostat	Auto Discovery
	Wired controller	Scenario 1
	24V Thermostat	Scenario 2

No.	Dial Code	Control Scenario	Function	ON	OFF	Note
14	SW3-4	2	Fan speed of cooling mode when 24V Thermostat is applied for.	Turbo	High	
15	SW4-1 SW4-2 SW4-3	1,2	Electric heat nominal CFM adjustment	Available settings are 000/001/010/011. Each digit corresponds an indivisual swith position. For example [SW4-1 OFF, SW4-2 ON, SW4 -3 OFF] = 010		
16	SW4-4	1	Temperature differential to activate third stage auxiliary heating(the GAP of T1 and Ts)Wire controller demand with heat pump+ Electric heat working together	6°F(3°C)	[Default]8°F(4°C)	Only valid for product which has three stage auxiliary heating.
17	S4-4	2	Default ON	[Default] For single stage supplemental heat,W1 and W2 are connected	For dual stage supplemental heat, W1 and W2 are controlled independently.	
18	S4-2	2	DH function selection	[Default] Dehumidification control not available	Dehumidification feature is enabled through thermostat	
19	SW5-3	1,2	L or Alarm relay selection	L output 24V or alarm relay close only when refrigerant sensor fault or R454B refrigerant leakage be detected	[default] L output 24V or alarm relay close when any fault be detected	
20	SW5-4	1,2	R output selection	R stop ouput 24V when refrigerant sensor fault or R454B refrigerant leakage be detected	[default] R keep ouput 24V even when refrigerant sensor fault or R454B refrigerant leakage be detected	

Controls

Advanced Wiring

One thermostat with multiple systems. Use a relay bank to parallel each mode. Wiring from indoor units to stat shown only. Wiring to outdoor units not shown.

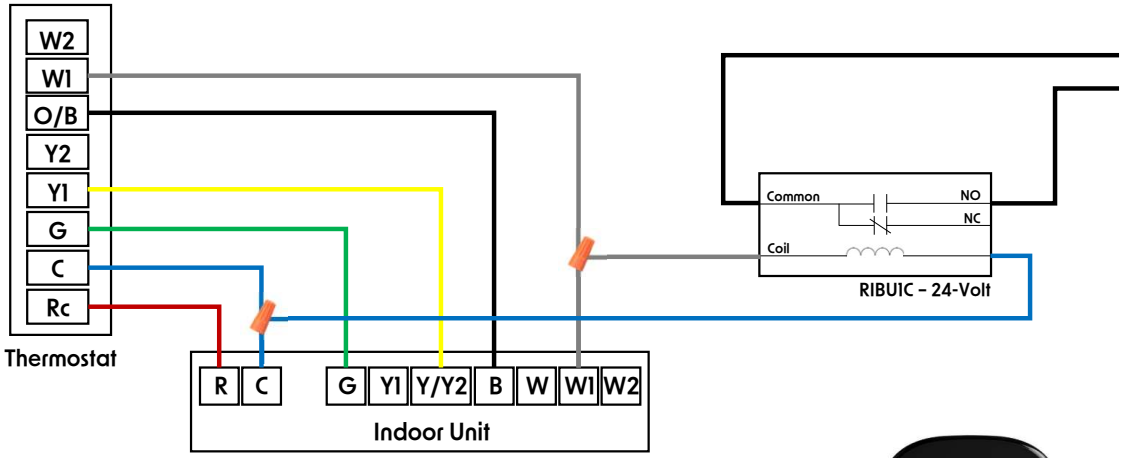


Controls

45MBAA / 45MU(A,H)A Hydronic Coil Option 1 – 24-Volt Control

Wire to W1 as if an electric heat packed is installed. This will operate the fan for the hydronic coil.

The SW4 DIP switches must be set to deliver the required CFM for the hydronic coil being installed. Use SW4 DIP switch charts previously shown.



2 Stage Heat & 1 Stage Cool
1 Stage Heat Pump
1 Stage Hydronic Coil

NOTES:
- Not all wiring is shown.
- RIB Relay or equivalent field supplied.

Thermostat notes:
- Thermostat requires outdoor sensor for changeover to boiler at balance point
- We recommend to set changeover around 5°F above balance point
- Set up thermostat so boiler and Heat Pump will not operate simultaneously

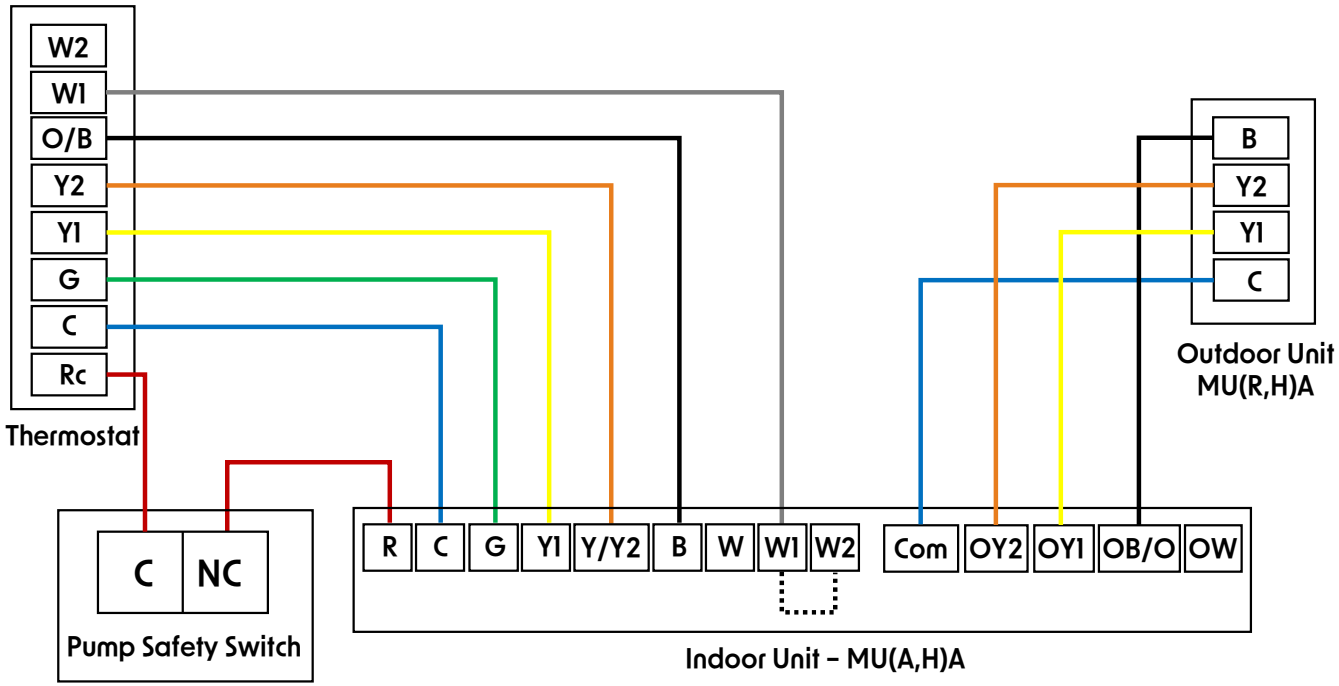
Accessory Options

Condensate Pump Connections – 24-Volt Systems

The Normally Closed (N.C.) safety switch should break the "R" wire supplying power to the Thermostat.

24-Volt Systems

Example:
37MU(R,H)A/45MU(A,H)A
3 Stage Heat & 2 Stage Cool



Accessory Options

Air Handler: 45MBAA, 45MU(A,H)A

Remote ON/OFF (CN2) (must remove JR1 Jumper)
N.C. contacts – When contacts open a "CP" Code will appear and system will shut down.

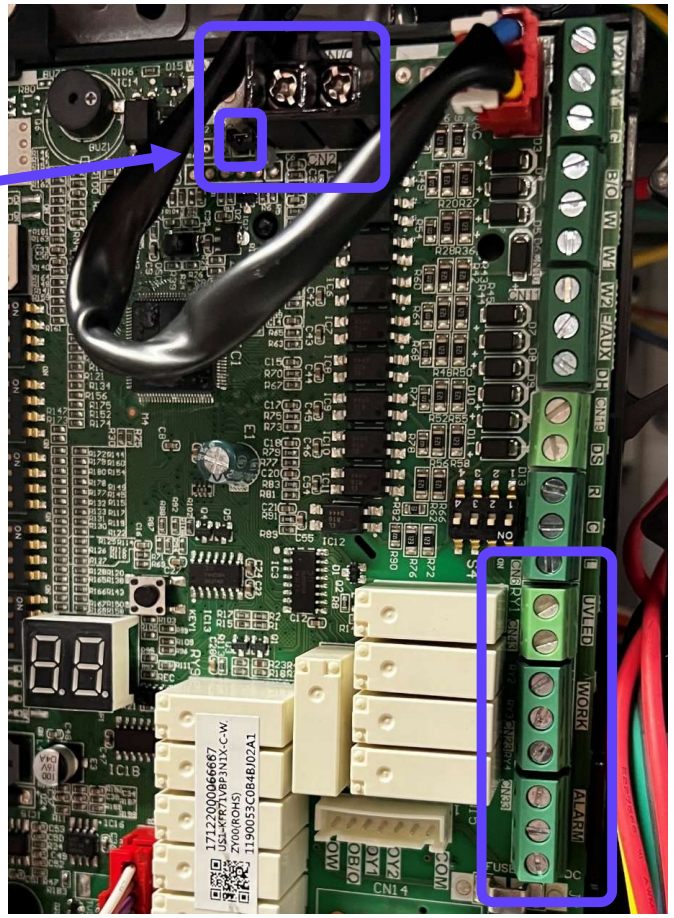
UV LED (CN43)
When Fan is ON, 24-Volts are available from contacts to power a pilot relay or other small device.

Alarm Output (CN33)
N.O. contacts – Contacts closes on Error.
Contacts rated: 250VAC, 10 Amps max.

Work (CN23)
N.O. contacts – Contacts closes when fan is ON,
Contacts rated: 250VAC, 10 Amps max.

Codes will only appear on the 1401 Wired Controller and/or the Communication PCB only.

Section of Communication PCB



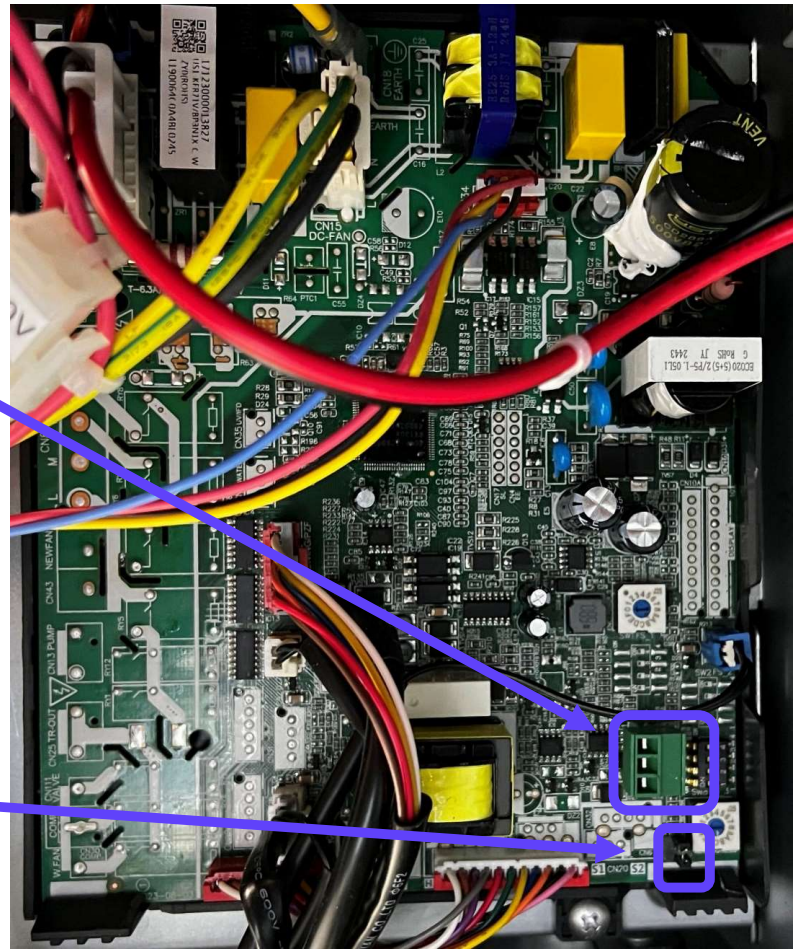
Accessory Options

Air Handler: 45MBAA, 45MU(A,H)A

Water (CN5) (must remove J7 Jumper)
N.C. contacts – When contacts open an "EH0E" Code will appear, and system will shut down.

Codes will only appear on the 1401 Wired Controller and/or the Communication PCB only.

These Green Terminal Blocks can be removed for easier wire connections. Always use the outside connections, the middle terminal is not active.



Main PCB
